Education

Faculty of Mathematics, University of Belgrade

Master's degree – Informatics

2025 – present

Faculty of Mathematics, University of Belgrade

Bachelor's degree – Informatics

2020 – 2025

Gymnasium “Sveti Sava”, Požega

Mathematics class (valedictorian)

2016 – 2020

Experience

Primary School “Vuk Karadžić”

Math Teacher

Mar 2025 – present

Data Science Conference, DSC 2024

Attendee Support Team Member

Nov 2024

Data Science Conference, DSC 2023

Program Team Member

Nov 2023

Student Union of Mathematicians, SUM

HR Team Member

Mar 2022 – Dec 2023

Projects

MarkEd [C++, Qt, JavaScript]

A lightweight Markdown editor with live preview, syntax highlighting, and PDF export – available as a desktop app and a web version.

ANDRÍ [React, TypeScript, Node.js, PostgreSQL, Docker]

Full-stack e-commerce site for a made-to-order fashion brand, with collections, gallery, blog, and cart; added a Dockerized PostgreSQL backend with Prisma-managed content and automated order/contact email notifications.

The Skyline Problem [C++, Qt]

Efficient solution to the classic algorithmic problem of computing a city's silhouette outline from a set of rectangular buildings, with a graphical visualization.

pobedi-me-ako-znas [C++, Qt]

A quiz with different game types testing knowledge and skills of two players. Code quality further improved via static analysis and memory profiling (azrs-tracking).

ZKLocation [Noir, TypeScript, Rust, Solana]

Proves user presence at a location without revealing exact coordinates, using Zero-Knowledge proofs verified on the Solana blockchain.

Audio-Recorder [Rust, Cargo, SQLite]

An application for recording, storing, and playing back audio, designed to run in a terminal.

Hantavirus K-mer Analysis [Python, Jupyter, scikit-learn]

Alignment-free classification of four hantavirus species from nucleotide k-mer frequencies ($k = 3-6$); benchmarked 5 ML algorithms across 40 model configurations, reaching up to 100% test accuracy.

Pathogenic Islands of *E. coli* [Python, SQL, StatRepeats]

Analysis of deviations in the occurrence of all four types of repetitive sequences within the pathogenic islands of the bacterium *E. coli*.

Skills

Programming Languages: Python, C, C++, SQL, Rust, Haskell, MATLAB

Systems & Environments: Linux, Jupyter Notebook, QtCreator, IntelliJ IDEA, VS Code, SPSS Modeler

Technologies: Git, OpenGL, Isabelle-HOL, NumPy, Pandas, Matplotlib, Scikit-learn

Markup Languages: $\text{\LaTeX}$, Markdown, HTML

Natural Languages: Serbian (Native), English (Advanced), French (Elementary)

Soft Skills: Teamwork, Time Management, Organization, Problem-solving, Leadership, Adaptability

Scientific Interests: Zero-Knowledge Proofs, Data Science, Bioinformatics

Other Interests & Hobbies: Writing Poetry, Assembling 3D Puzzles or Models, Origami, Rollerblading
